#### Meeting called to order at 14:08 GMT

#### Minutes:

- Approval of minutes from January 18th meeting.
  -
- Review of [action items](#) from previous meetings.
  - Adoptium website security concerns
  - Deprecation of adoptopenjdk docker images. Will do one-off run to bring the up-to-date and then progress the plan that was created last year
  - Infra scan report provided by EF of Adoptium’s servers
  - Sanhong/Lan/Andrew have been added as PMC members but they don’t yet have the access to top level adoptium/adoptium repo.
- Release process:
- Code freeze
  - Enabled on temurin-build, mirror-scripts, release tool repos. Not on ci-jenkins-pipelines yet as it uses a release branch
  - Installers being update mid release now requires double PMC approval
  - Branch protection to be enabled on more of the repos used for build

- AoB
  - Release notes: JSON files are ready (pushed one up for JDK19) and now need to be made available. We will not hold up release announcement for it but will reference the JSON files as an example of what is “coming soon”. Need to check on whether CVE data is included (or can be included)
  - Some resistance to moving away from asciidoc that is being discussed in the website repo
