

# Adoptium Project Management Committee Agenda & Minutes

“The PMC as a whole, and the PMC leads in particular, are ultimately responsible for ensuring that the Eclipse Development Process is understood and followed by their Projects. The PMC is additionally responsible for maintaining the Top-Level Project’s charter.” [\[ref\]](#)

---

**Date:** 2023-Apr-26

## Agenda:

- Approval of [minutes](#) from April 19th meeting.
- Review of [action items](#) from previous meetings.
- Review of [GitHub issues flagged for PMC agenda](#).
  - Support Debian base images (Java 8, 11, 17) ([containers#99](#))
  - Add support for Amazon Linux 2023 ([installer#657](#))
- April CPU release update
  - Checklist ([adoptium#223](#))
  - Release status dashboard ([adoptium#224](#))
  - Retrospective ([adoptium#225](#))
- OtterDog update
- Co-location rack review
- Adoptium website security concerns (update)
- AoB
  - [slambert] OpenJDK Dev Support [proposal](#)
  - [anleonar] Release blog and official statement on no arm32/pLinux/s390x/AIX/win32 on jdk-20 ? Need for update to Support page for no Win32 and pLinux (shipped in error for jdk-20+36) ?

## Action items:

Date	Description	Status
2023-01-18	George to review Adoptium website security concerns (GA/SXA/TE) for main website, and TRSS.	In progress

2023-04-19	ACTION: George will check through the CI pipeline and confirm that the testimage contains shippable content.	Done
------------	--	------

### Attendees:

- ☒ George Adams
- ☒ Stewart Addison
- ☐ Carmen Delgado (guest)
- ☒ Tim Ellison
- ☒ Severin Gehwolf (left at 14:30 BST)
- ☐ Shelley Lambert
- ☐ Andrew Leonard
- ☒ San Hong Li
- ☒ John Oliver
- ☐ Martijn Verburg
- ☐ Lan Xia

### Meeting called to order at 14:03 BST

### Minutes:

- Approval of [minutes](#) from April 19th meeting.
  - Minutes of the meeting were approved.
- Review of [action items](#) from previous meetings.
  - Website security concerns are deferred to discussion later in the meeting.
  - Review of pipelines showed no concerns for releasing test images and the PMC agreed these would be released.
- Review of [GitHub issues flagged for PMC agenda](#).
  - Support Debian base images (Java 8, 11, 17) ([containers#99](#))
    - i. The PMC see no reason to include this additional base image. It will cause further demand on the project, with a workable solution having been described.
    - ii. DECISION: PMC will not plan to produce Debian-based container images.
    - iii. Tim will add a comment to the issue explaining the decision.
  - Add support for Amazon Linux 2023 ([installer#657](#))
    - i. Noted that we don't test on this platform.
    - ii. We could add a path in the package repository for it to be picked up, but doing so implies that it is sanctioned.
    - iii. Useful to source an AMZN machine to run tests, and ensure things behave as expected.
    - iv. Need to reinforce clarity on supported platforms vs best effort / expected to work platform.

- v. No plans to bring Amazon Linux into a formally supported Linux distro for the project.
  - vi. Severin pointed out that the distinction of “formally tested”, and “untested but expected to work” is not clear to end users who are installing via a package manager.
  - vii. Should add a link from support repo issue template to official supported platforms.
- April CPU release update
  - Release progressing well. Last few pieces of 8u being completed. Awaiting arch32 tag in upstream repo.
  - End of release tasks underway, including updating the support page with dates and supported platforms per JDK version.
  - Explanation that an update of containers will cause breakage on platforms that are not available due to Dockerhub’s management of multi-arch and the “latest” tag.
    - i. As platforms become available they can be pushed with the new sha.
  - Blog planned for release, to include absent platforms.
- OtterDog update
  - Sxa and gdams spoke with EF about the current state of the tool.
  - <https://github.com/adoptium/eclipsefdn-private>
  - <Severin left the meeting at 14:30>
- Co-location rack review
  - Historical co-lo that has not been well utilised by the project at the moment.
  - Still paying for the hosting of servers that are not required for pipelines.
  - Looking to decommission unless there is any future predicted requirement.
  - Would aim to repurpose the machines where possible.
    - i. Includes Pi’s, macminis, ampere, switches, firewalls, etc.
  - ACTION: sxa to confirm with the PMC channel that use of the historical co-lo can be ceased, and how the kit will be decommissioned.
- Adoptium website security concerns (update)
  - Further issues have been resolved.
  - Gdams gave a walk through of outstanding issues, and exceptions that will be required.
- AoB
  - [slambert] OpenJDK Dev Support [proposal](#)
    - i. Deferred to a future meeting
  - Andrew expressed thanks to the team for help on achieving an on time release.

**Meeting closed at 14:49 BST**
