

Adoptium Project Management Committee Agenda & Minutes

“The PMC as a whole, and the PMC leads in particular, are ultimately responsible for ensuring that the Eclipse Development Process is understood and followed by their Projects. The PMC is additionally responsible for maintaining the Top-Level Project’s charter.” [\[ref\]](#)

Date: 2021-May-12

Agenda:

1. Publishing minutes to the pmc list.
2. First Eclipse Temurin release
 - a. Walkthrough of [Milestone 1 status](#)
 - b. TCK access status
 - c. adoptium.net domain control?
3. AQAvit & Compliance
4. Bringing items to the WG
 - a. Funding for Solaris machines
 - b. Package hosting alternatives for installers (Cloudsmith through Cloudflare)
 - c. Devovx UK marketing opportunity (from Steve Poole)
5. Docker repo transition plan

Attendees:

- Severin Gehwolf (Red Hat)
- Tim Ellison (Red Hat)
- Shelley Lambert (Red Hat)
- Stewart Addison (Red Hat)
- Hendrik Ebberts (Karakun)
- George Adams (Microsoft)
- Martijn Verburg (Microsoft)

Minutes:

- DECISION: Agreed to publish public minutes after they are approved by the pmc.
- ACTION: Tim to publish minutes of 5th May.

- Consider turning off public views on Jenkins while the transition to Temurin takes place, in particular to isolate the OpenJ9 builds
 - Move non-temurin builds into own pipeline, so they continue to help AQAvit without distraction from Temurin builds. Also supports access control scope.
 - Maybe access control on build scripts folder to lock down non-Temurin builds
 - Lock down current work, and move Temurin out to a non-locked location.
- Work progressing on TCK infrastructure without access to the testing materials
- Infra accounts getting transferred to EF.
 - EF has strong preference to use own accounts for TCK-controlled machines
 - ACTION: Open a ticket with the EF to create JCK machines for Milestone 1, Win/Lin/Mac machines.
- Starting to put required notices in place as per Oracle agreement
- Codesigning underway. Process is difficult as it is internal at EF. The process takes 45mins for debug images, which is unlikely to work for us.
 - Windows code signing complete as Eclipse. Need to sign installer as EF
 - MacOS still being worked for 8, and more info required to 11 onwards
- Still awaiting JCK access. Blockers beyond our immediate control at the moment
- Need to raise a ticket to create subdomains for adoptium.net
 - Ping Eclipsewebmaster on Adoptium Slack to get attention
- AQAvit and certification
 - Had conversation with Mike M and Paul B to describe the “ceremony” around getting a certification mark, defining the AQAvit process, and the rights obtained.
- Tag WG requests as official items to put on the WG agenda
 - Consider using same process as the TSC used, tag issues.
 - Current items not progressed. New meeting with packet.io to consider for hosting
- Need to understand the Cloud9 colocation position and ensure that we have access to machines and agreements
 - ACTION: George and Sxa will sync up with Andreas to get a hand-over
 - Ampere server will be preconfigured for us, need to pass ip block info
 - Alibaba offer of RISC-V machine will be added to Jenkins by Sxa. This will be used for non-Temurin builds, and therefore will be on alternate pipeline discussed earlier.
 - A RISC-V board has been moved from gdams to sxa
- Docker repo transition plan
 - No CQ for transitioning the repo to Eclipse. It needs clean-up anyway
 - Docker is a significant proportion of the downloads
 - Needs plan for platform matrix support, docker org, image tags, transition from AdoptOpenJDK etc. Which platform OS layers are going to be supported etc.
 - Distro support guided by download stats and requirements.
 - New dockerhub org to host new order. Lease older org with archive of images for use by those who need them.
 - Need to add to the milestone plan. Do we need our own org? Official images may be able to cover all the needs. Need assurance that the images we have are tested.
 - Draw up matrix of platforms that we wish to appear there.

- ACTION: Tim to create an issue to capture the plan

END
