

Adoptium Project Management Committee Agenda & Minutes

“The PMC as a whole, and the PMC leads in particular, are ultimately responsible for ensuring that the Eclipse Development Process is understood and followed by their Projects. The PMC is additionally responsible for maintaining the Top-Level Project’s charter.” [\[ref\]](#)

Date: 2022-March-09

Agenda:

- Approval of minutes from February 23 meeting.
- Review of [action items](#) from the previous meeting.
- Upgrading MacOS 10.10 build/test machines ([adoptium/infrastructure#2496](#)).
- Request to Support alpine images for arm32v7/armhf ([adoptium/containers#141](#)).
- Building jdkXXu-dev branches for AIX ([adoptium/temurin-build#2868](#)).
- Transparency on github repo settings for repos with active dev (seem like they are different and changing)
- Shipping Alpine Linux JDK 8u (and equivalents) process and checklists.
 - <https://github.com/adoptium/jdk8u/pull/9>
- Standing up the marketplace - next steps.
- Approve [update to CA Certs](#)
- [API - Latest Nightly builds no longer showing](#)

Action items:

Date	Description	Status
2021-12-01	ACTION: Martijn to speak to Eclipse about finding a new home for PMC documentation and meeting resources currently hosted outside project control.	In progress

2022-02-23	ACTION: Sxa to follow-up with Mikhael about the EF automated process for GPG signing of Temurin releases.	In progress
------------	---	-----------------------------

Attendees:

- ☒ George Adams
- ☒ Stewart Addison
- ☐ Hendrik Ebberts
- ☒ Tim Ellison
- ☒ Severin Gehwolf
- ☒ Shelley Lambert
- ☒ John Oliver
- ☒ Martijn Verburg

Meeting called to order at 14:03 GMT

Minutes:

- Approval of minutes from February 23 meeting.
 - Minutes of the previous meeting were accepted as a true record.
- Review of [action items](#) from the previous meeting.
 - Still waiting for a response back from EF about GPG signing releases.
- Upgrading MacOS 10.10 build/test machines ([adoptium/infrastructure#2496](#)).
 - These versions are no longer supported by Temurin, and are old machines. Proposal to release them.
 - We also have some MacOS 10.12 and 10.13 machines. Our support statement states we only support from 10.14. Build system is using 10.14, so these earlier releases are only used for testing. Proposal to also drop the 10.12 and 10.13 machines.
 - PMC agreed to decommission these old machines.
- Request to Support alpine images for arm32v7/armhf ([adoptium/containers#141](#)).
 - Not seeing a large community demand for this, and there is real work required to provide it.
 - George will pass on some information to help this requester, but the PMC has no plans to make it an official Temurin release platform.
- Building jdkXXu-dev branches for AIX ([adoptium/temurin-build#2868](#)).
 - Request from IBM to test these branches for OpenJDK upstream development.
 - Discussion about whether this should be provided at Adoptium with a view to IBM notifying OpenJDK, or provided as a service directly to the OpenJDK community so all developers can check for issues on this platform.

- Need to ensure Adoptium has enough AIX capacity for such upstream dev testing, without interfering with the build/test/release of Temurin. Sxa stated that this should not be a problem now.
 - Discussion about various ways to provide feedback to the upstream community directly rather than via an individual at IBM that does not result in disruption upstream.
 - Proposal to engage with upstream about how to engage with our test failures during dev.
 - ACTION: Shelley to start conversations on how to provide feedback to the OpenJDK community on AIX development branch testing.
- Transparency on github repo settings for repos with active dev (seem like they are different and changing).
 - Different settings across Adoptium repos, and some different to AdoptOpenJDK. Can we get visibility into the settings and uniform access across the team?
 - Project leads have slightly elevated rights compared to committers, including branch protection in some places.
 - George should look to unify the repository access across project leads.
 - Shelley concerned that release branches should not accept commits from any committer as these are critical project areas.
- Shipping Alpine Linux JDK 8u (and equivalents) process and checklists.
 - <https://github.com/adoptium/jdk8u/pull/9>
 - The checklists for this release were not public as most of the work was done in the compliance project.
 - Discussion about the safety of releasing from source in an open patch set. Propose to land the patches in the main branch and link the release to that source.
 - Discussion about extending the Temurin build system to support a release build from a branch.
 - ACTION: George will document how the Alpine Linux JDK8u release was built and the limitations of the current build system that required this approach.
 - Severin observed we need this flexibility in the future.
 - Discussion of the number of votes that should be required for a release to allow for adequate scrutiny. The PMC decided to go with:
 - i. Two or more for a regular release binary
 - ii. Super majority for non-standard binaries/new platforms.
- [Update CA Certs](#)
 - Pull request based on updated Mozilla release. Please can the PMC review and comment/approve the linked PR.
- [API - Latest Nightly builds no longer showing](#)
 - Build changes have caused a modification to the json output, resulting in the API not seeing the latest nightlies.
 - ACTION: John is updating the Adoptium API code to recognize the new json output from the build system and will provide a PR soon to resolve the missing nightlies.
- Standing up the marketplace - next steps.
 - Finalize documentation for publishers (incl. site relaunch).

- i. Completed - feedback welcome.
- API code updates, schema, and examples.
 - i. PRs for the repo to run the marketplace-api and Temurin listing.
 - ii. Temurin listings are point in time via regular API conversion.
 - iii. Uses a example signatory key at the moment.
- Publishing Temurin data incl. AQAvit results.
 - i. No plans in place at the moment.
 - ii. Needs enhancement for OpenJDK commits related to each source tag.
- Switching from disco API to marketplace database.
 - i. <https://github.com/adoptium/website-v2/pull/132>
- Share materials with working group members and respond to feedback.
 - i. Was shared last week.
- Work with publishers to bring data on-line - trial runs and go live.
 - i. Wait for Temurin live data availability as example before engaging other publishers.

Meeting closed at 15:04 GMT
