Adoptium
Project Management Committee
Agenda & Minutes

"The PMC as a whole, and the PMC leads in particular, are ultimately responsible for ensuring that the Eclipse Development Process is understood and followed by their Projects. The PMC is additionally responsible for maintaining the Top-Level Project's charter." [ref]

Date: 2022-February-23

Agenda:
- Approval of minutes from February 16 meeting.
- Review of action items from the previous meeting.
- #151 Drop apt-key usage from Debian/Ubuntu instructions
- January CPU release close-out.
- Approval to add fast startup incubator job to jenkins like this one?
- What are the implications of Adoptium->Alibaba Slack link? Can/should we aim to do the same for OpenJ9?
- GPG signing of releases.
- Informational: Sponsorship button rolled out across GitHub org.
- Info: Issue to embed the donate button https://www.eclipse.org/donate/adoptium/ into post-download thankyou page: https://github.com/adoptium/website-v2/issues/114

Action items:

Date	Description	Status
2021-12-01	ACTION: Martijn to speak to Eclipse about finding a new home for PMC documentation and meeting resources currently hosted outside project control.	In progress

Attendees:

- ☑ George Adams
- ☑ Stewart Addison
- ☑ Hendrik Ebbers
- ☑ Tim Ellison
- ☑ Severin Gehwolf (left at 14:41)
- ☑ Shelley Lambert
- ☑ John Oliver
- ☑ Martijn Verburg (from 14:41)

Meeting called to order at 14:05 GMT

Minutes:
- Approval of minutes from February 16 meeting.
  - Minutes of the previous meeting were approved.
- Review of action items from the previous meeting.
  - One outstanding action item was reviewed. The PMC are happy to leave open for now as this is not urgent.
- #151 Drop apt-key usage from Debian/Ubuntu instructions
  - This is a PR for updating the documentation.
  - Also discussion of usage for wget/curl as dependencies for installer.
  - PMC are encouraged to read the PR and express an opinion there to ensure that the change represents good practice, and is how we wish to guide users.
- January CPU release close-out.
  - JDK17 Win32 activity continues. This platform has some AQA testing regression which is being reviewed. Possibly introduced by compiler changes. We do have users asking for an outlook of availability.
  - The position of AIX is still not clear regarding full testing in JCK. This is being handled in the compliance project.
  - Alpine JDK11 respin still not available, triage continues.
- Approval to add fast startup incubator job to jenkins like this one?
  - PMC would prefer to keep the job distinct from others in Jenkins.
  - Agreed that we should add it to the Adoptium build machine.
- What are the implications of the recent Adoptium->Alibaba Slack link? Can/should we aim to do the same for OpenJ9?
  - This allows people with verified accounts elsewhere to participate in Adoptium Slack. Alibaba have mirrored the channel into their Slack workspace.
  - Happy to mirror channels with Alibaba and we will keep an eye on other requests to ensure they are equally appropriate.
  - Clarification that users in the other org don't incur further Slack costs to Adoptium.

- [GPG signing of releases](#)
  - Long standing open issue.
  - Now available to be signed as an Eclipse service.
  - Note that the Mac installers are currently signed this way, so reuse the same steps for build artefacts.
  - If EF are willing to share a signing key this should have a strong web of trust, and we should have instructions for verifying.
  - ACTION: Sxa to follow-up with Mikhael about the EF automated process for GPG signing of Temurin releases.
- Informational: Sponsorship button rolled out across GitHub org
  - A new button has been added to the Adoptium repositories that take people to the donate page at Eclipse.
  - Keep an eye open on repos to check that it is not interfering with current content.
- AoB
  - Work continues on the website-v2. Please review.
  - Marketplace API is now live with sample data to allow potential publishers to test and see what they should be doing.
  - Able to generate the Swagger documentation for the metadata. Potential to provide schema checking and logging information for publishers.
    i. https://marketplace-api.adoptium.net/q/swagger-ui/
  - Discussion of logging information in a way for publishers to check their status.
  - Publishers control how they structure their data, multiple files or single file describing the binaries to appear in the marketplace. The index file will pull together the consolidated information.
  - AQAvit verification instructions are currently in a PR on website-v2.

Meeting closed at 15:00 GMT
